DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 9, 10 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Cheng (US Pat. 6,600,724) hereafter Cheng.

Regarding claim 9, Cheng discloses a routing table structure within an ATM switch in general however, it can be applied to other networks as well (abstract), the routing table structure comprises of:

a routing table for routing of packets and its associated messages (see Fig 1, col 5 L55-64 consisting of switches within a network with each switch having a routing table), an indexing scheme is used for selecting from a table based on the information requested (col 4 L33-47)

a route learning device (Fig 3, 22) which stores the newly learned address in a network address table (32, see col 7 L20-40), the route learning system is updated as to changes in the network topology which may be addition or deletion of links (col 6 L52-60)

a route selecting device (Fig 4, col 10 L8-17) for selecting an acceptable route to the destination node via use of shortest path routing (SPT) or random routing using the cost as the basis for selection of a link.

Regarding claim 10, Cheng discloses computational routing using DTLs (col 5 L20-25 and claim 2) which provides source computed routes which it appears are fixed and do not change and therefore are interpreted to represent the original routes within a table which can be the reset form of the device within Cheng.

Regarding claim 12, Cheng discloses route learning and route selecting (Fig 3, 22) which stores the newly learned address in a network address table (32, see col 7 L20-40), the route learning system is updated as to changes in the network topology which may be addition or deletion of links (col 6 L52-60). The route-selecting device (Fig 4, col 10 L8-17) establishes an acceptable route to the destination node via use of shortest path routing (SPT) or random routing using the cost as the basis for selection of a link.

Allowable Subject Matter

Claims 11, 13-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 1 is allowed.

Response to Arguments

Applicant's arguments, filed 24 February 2004, with respect to claims 1-8 have been fully considered and are persuasive. The rejection of claims 1-8 has been withdrawn.

Furthermore, upon reconsideration, the examiner withdraws the Election/Restriction requirement as originally presented in the 24 October 2003 Office action. Accordingly the non-elected claims 9-15 have now been considered on the merits for current examining purposes.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Raj Jain whose telephone number is 571-272-3145. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wellington Chin can be reached on 571-272-3155.
